

Multiply 3-digits by 2-digit

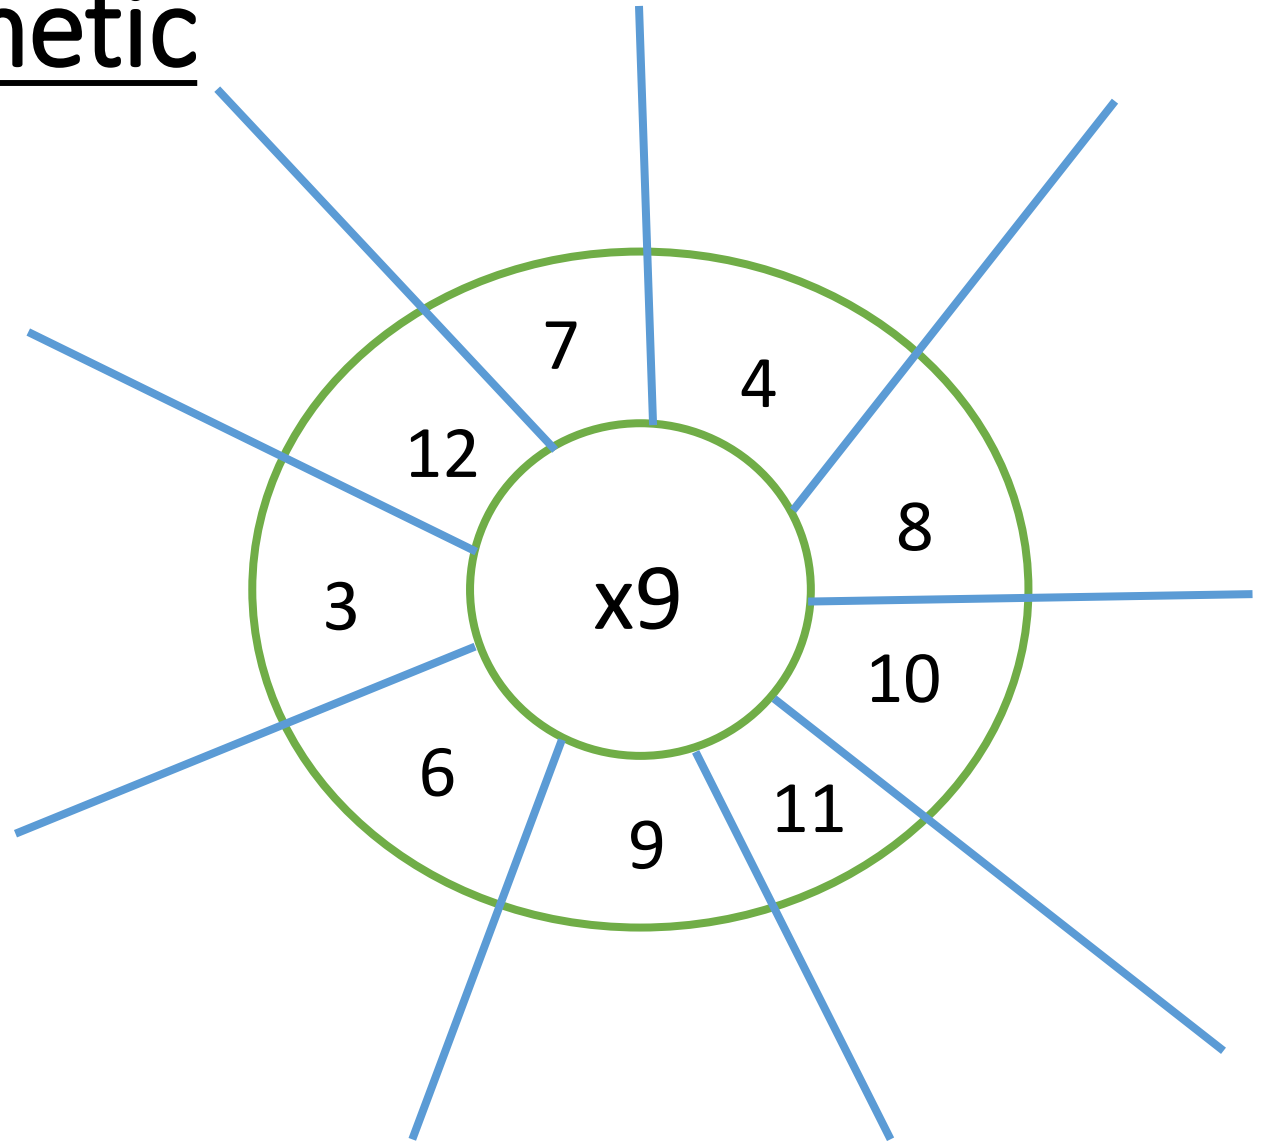

Fluency/Recall/Arithmetic

Target Times Tables

Fluency/Recall/Arithmetic

Target Times Tables

Chinese chanting

One nine is nine

Two nine is eighteen

Three nine is twenty-seven

Four nine is thirty - six

Five nine is forty-five

Six nine is fifty- four

Seven nine is sixty-three

Eight nine is seventy- two

Nine nine is eighty-one

Nine ten is ninety

Nine eleven is ninety-nine

Nine twelve is one hundred and eight

Why don't we chant Four NINES (plural)?

It helps us with **Commutativity**
What does commutative mean?

Commutativity is when 2 numbers can be added or multiplied & the same answer will be found no matter what order they are in.

Independent Practice

Task 1 – copy and complete

$$246 \times 27$$

$$127 \times 38$$

$$329 \times 26$$

$$164 \times 43$$

If you are finding these tough, why don't you try 2 digit x 2 digits again from yesterday.

Eg. 23×14

34×32

17×15

Here are examples of Dexter's maths work.

			9	8	7
x				7	6
<hr/>					
		5	5 ⁹	4 ²	2
		6	6 ⁹	4 ⁰	9
<hr/>					
	1	2	8	1 ³	1

			3	2	4	
x				7	8	
<hr/>						
			5	9	2	
		2	1	3		
		2	1 ²	2 ⁶	8	0
<hr/>						
		3	2	7	2	

He has made a mistake in each question.

Can you spot it and explain why it's wrong?

Correct each calculation.

Challenge answers

Here are examples of Dexter's maths work.

			9	8	7				3	2	4
x				7	6	x				7	8
		5	5 ⁹	4 ²	2				5	9	2
		6	6 ⁹	4 ⁰	9		2	1	3		
	1	2	8	1 ³	1	2	1	2	6	8	0
								3	2	7	2

He has made a mistake in each question.

Can you spot it and explain why it's wrong?

Correct each calculation.

In his first calculation, Dexter has forgotten to use a zero when multiplying by 7 tens.

It should have been

$$987 \times 76 = 75,012$$

In the second calculation, Dexter has not included his final exchanges.

$$324 \times 8 = 2,592$$

$$324 \times 70 = 22,680$$

The final answer should have been 25,272
